JavaScript Technical Task:

LocalStorage/Table:

1. Create 6 Input Fields.
Labels :>>
 Name,
Age,
Gender,
Occupation,
Salary,
Contact No.
and Create a BUTTON below all inputs.

2. Create a TABLE below all elements(Created in Step-1), TABLE headings: Labels mentioned above.

3. On BUTTON click:
3.1 save all Input Fields data into LOCAL STORAGE
3.2 Show these data into TABLE(Created in Step-2).
3.3 Empty all Input Fields.

4. On Page Refresh, Or First Load, get LOCAL STORAGE data(which was previously stored/ or if data in localstorage) and SHOW them into TABLE.

* Create all html elements using JavaScript.
* If LOCAL STORAGE is empty then the table should be Blank(OR Show message: Data Is Not Available).
